

Interview Summary – Farmer Insights

Objective:

Understand how farmers currently access information about crop prices, weather updates, government schemes, and crop problems.

Key Findings

Crop Prices

- Farmers usually ask people in the market to know crop prices.
- Some farmers call traders or markets directly.
- Online platforms are rarely used.

Weather Information

- Farmers often observe the sky and environmental signs to predict weather.
- Weather apps are used only when weather becomes unpredictable.

Government Schemes

- Information about schemes spreads through village announcements or other farmers.
- Sometimes farmers miss schemes due to lack of awareness.

Crop Problems

- Farmers mostly identify crop diseases by visually observing the plants.

Technology Usage

- Farmers use smartphones mainly to check farming methods or advice.

Key Insight

Farmers need a **simple, reliable platform** that provides crop prices, weather updates, government schemes, and crop advice in **one place and in their local language**.
